THE CROSSING, TYPED: PERELMAN'S ROUTE STRICTLY INSIDE THE BIT

PERELMAN'S ROUTE, TYPED IN THE KERNEL: ONE INHABITANT STRICTLY INSIDE THE BIT

THE BIT · THE ACT, EXACTLY THE SENTENCE

the minimal premise: necessary and sufficient, and every route to the sentence passes it

A CROSSING

a functional never rising along the step, level off the seat only where the step lands on it

A WITNESS · THE 2002 FUNCTIONAL'S SHAPE

strictly decreasing along the step at every state off the seat, and invariant under the rescaling

PERELMAN'S DERIVATION

one inhabitant of the bit, accepted as unconditional on 18 March 2010

the route needs, beside the functional, the κ-solutions, the canonical neighbourhoods, surgery and finite extinction: it carries more than the sentence

the self-similar flow

the act holds, a crossing exists, no witness exists

WHAT THE KERNEL PROVES · MASTER, THEN MINI CASE

A witness gives the act

`witness_gives_act` · `a_witness_gives_the_act`

The act holds where no witness exists

`act_without_witness` · `no_witness_on_the_soliton`

Every witness is a crossing, and the crossing is wider

`crossing_types_the_crossing`
`the_witness_is_strictly_inside_the_act`

Perelman's route is strictly stronger than the sentence

`faithful_route_strictly_stronger`
`the_witness_route_is_strictly_stronger`

The bit is the minimal premise

`the_bit_is_the_minimal_premise` · `the_bit_is_minimal`

Every route to the sentence passes the bit

`seven_routes_pass_the_bit` · `the_witness_route_passes_the_bit`

THE RECORD ACCEPTED THE INHABITANT; THE KERNEL PUTS THE INHABITANT INSIDE THE BIT

Whatever yields the sentence yields the bit, so to accept Perelman's derivation as resolving the question was to accept a delivery of the Poincaré bit. The bit stood at premise grade in Lean before the award and stands there after it.

`the_witness_is_a_strict_subtype` · `the_offering_is_strictly_inside_the_bit` · `the_poincare_precedent` · `the_stronger_case_in_miniature`

READING theorem on no axiom · on propext (and Quot.sound) · on Lean's standard axioms · definition or structure · names shown by their last component
