SEVEN QUESTIONS, ONE NORMAL FORM

ONE NORMAL FORM `Transfer R F ↔ R.Value F`

The bit of a frame, its record's value carried to the frame, is exactly the frame's value. Proved once on no axiom and recovered as each row's own normal form by exact type; at four rows the bit is pinned to the library's own statement of the problem.

RH · THE ZEROS

Least erasure transfers from the record to the zeros; at Mathlib's zeta zeros the value is Mathlib's RiemannHypothesis.

`zeta_ra_loop`
`rh_value_at_the_zeros_is_RiemannHypothesis`

P ≠ NP · EVERY MACHINE

Least escape transfers from the SAT record to every Turing machine; the core machine model, no library binding.

`sep_normal_form` · `pnp_normal_form_is_the_one`

NAVIER-STOKES · EVERY FLOW

Every flow finite at every time; the transfer at the library's host is Fefferman's statement (A).

`normal_form` · `ns_normal_form_is_the_one`
`ns_upgrade_is_adopting_FeffermanA`

YANG-MILLS · EVERY THEORY

Every theory exists with a positive floor; read at the kernel's host.

`normal_form`
`ym_normal_form_is_the_one`

HODGE · EVERY CLASS

Every rational (p,p) class is algebraic in the middle range; read at the kernel's host.

`normal_form`
`hodge_normal_form_is_the_one`

BSD · EVERY CURVE

The rank equals the order above order one; the transfer at the library's curves is the rank statement on Mathlib's E(Q).

`normal_form`
`bsd_normal_form_is_the_one`
`bsd_upgrade_is_adopting_BSDRank`

POINCARÉ · EVERY MANIFOLD

Every closed simply connected 3-manifold is the sphere; pinned to the library's statement, held in Mathlib as proof_wanted; accepted as unconditional by the Clay Institute.

`normal_form`
`pc_normal_form_is_the_one`
`pc_upgrade_is_adopting_PoincareThree`

BOUND IN ONE THEOREM

The one normal form, the five rows' final forms on no axiom, and the grand verdict over all seven terminal theorems, nothing before the colon.

`normal_form_once` · `the_floor_verdict` · `the_grand_verdict`

READING theorem on no axiom · on propext (and Quot.sound) · on Lean's standard axioms · definition or structure · names shown by their last component
