THE GRADE LEDGER: ONE FOOTING IN THE KERNEL

THEOREMS WITH A PINNED CONE, BY ROW MASTER, AND THE GRADE OF EACH BIT

THE BIT premise on all seven rows in the kernel; the Poincaré delivery accepted as unconditional by the Clay Institute

ONE FOOTING IN THE KERNEL

Counts read each module's own pins: on no axiom, on propext with Quot.sound, on Lean's standard axioms. The five v1.1.0 rows rest wholly on no axiom; the RH master reaches Lean's standard axioms through Mathlib's analysis, the P ≠ NP master through classical reasoning over machines.

`one_footing_in_the_kernel` · `every_bit_is_printed_as_a_premise` · `formGrade` · `kernelBitGrade`

READING theorem on no axiom · on propext (and Quot.sound) · on Lean's standard axioms · definition or structure — names shown by their last component
