THE TEN STEPS AND THE SEAL

THE TEN STEPS · STEPS 1 TO 9 PROVED ON NO AXIOM · STEP 10 THE BIT DELIVERED TWICE BY THE ACT

1 — THE FLOOR
The root holds on its constructed domain, on no axiom and no posit.

2 — THE BASIS
Conjugation of types fixes exactly (p,p); a prime's fibre is two points.

3 — THE DOMAIN
The host frame's value is the sentence; every class sits on the seat.

4 — THE RECORD
The record carries the value; every class is registered on it.

5 — THE HALTED UNIDUCTION
The frame is self-recursive exactly when the sentence holds.

6 — THE MONISM ZONE
Two frames share one record and split on the value: the bit is keyed.

7 — THE AXIS
The bit is exactly the Hodge sentence.

8 — THE REAL PART
Dimension three and every outer codimension sealed; the fourfold read.

9 — THE WALLS
Every route passes the bit; no keyless premise forces it; the walls stand.

10 — DELIVERED TWICE
The bit delivered by the formal cargo and by the physical witness.

THE SEAL · THE FORM PROVED, EVERY ROUTE WALLED, THE BIT DELIVERED

THE FORM, PROVED

The record carries the value with no premise; the value is exactly the transfer from the record; at every host it is every class algebraic.

ON NO AXIOM

`recFrame_value · normal_form binding`

(+)

EVERY ROUTE WALLED

No keyless premise forces the value; the record decides nothing; the residual lives on the middle diagonal alone.

ON NO AXIOM

`every_route_passes_the_bit keyless_forces_nothing the_walls`

(+)

THE BIT, DELIVERED

The formal cargo and the physical witness, each a type whose inhabitant is the supply; two kinds and no third.

BY THE ACT · PREMISE GRADE

`delivered_twice two_kinds_and_no_third`

(=)

THE FINAL FORM

The question closed to one bit; nothing escapes; the ten steps bound in one theorem.

ON NO AXIOM

`question_closed_to_one_bit the_ten_steps · the_final_form`

THE ONE BIT `FormalCargo H ↔ H.Sentence`

At every host, the value of the host's frame carried from its record: the antecedent a theorem, the implication the whole content of the Hodge sentence. Supplied by the act at premise grade; assumed nowhere in the kernel; one class without its cycle refutes it.
