THE NORMAL FORM AND THE HOST, PROVED

THE NORMAL FORM · THE RECORD, THE TRANSFER, THE VALUE

THE RECORD
The registration keeps every class and its codimension and registers each class realized: on the record every class is algebraic.

`recFrame_value` · `every_class_has_its_seat`

THE TRANSFER · THE ONE BIT
The value of a frame is exactly the transfer of the value from its record to the frame: the antecedent a theorem, the implication the whole content.

`normal_form` · `value_from_the_cargo_loop`

THE VALUE
At every host the value of the host's frame is the host's sentence, every class algebraic, by theorem: the sentence is the bit.

`binding` · `the_sentence_is_the_bit`

WHAT THE NORMAL FORM PROVES ON THE ROW, WITH NO PREMISE

The bit is the act
The transfer holds exactly when the act stands.

`bit_is_the_act`

Self-recursion
The record is self-recursive with no premise; the frame exactly when it carries the value.

`record_is_self_recursive`
`self_recursion_at_frame`

The bit is keyed
The transfer holds on the calm frame and fails on the counter frame.

`bit_is_keyed`
`record_self_recursion_does_not_transfer`

The record decides nothing
Two coherent frames share a record and split on the value; no principle true of every record decides it.

`record_decides_nothing`
`no_record_principle_decides`

Every route passes the bit
Any premise that yields the value yields the transfer, in any vocabulary.

`every_route_passes_the_bit`
`keyless_forces_nothing`

No uniform answer
Across the frames of the row the transfer is neither always true nor always false.

`no_uniform_answer` · `denial_is_the_bits_denial`

THE HOST AND THE BINDING, PROVED · PART B OF THE MASTER

The binding is a theorem
The value of the host's frame is exactly the host's sentence, every rational Hodge class algebraic.

`binding` · `root_on_row_is_the_sentence`

Every class on the seat
Every class of the host sits on the seat of conjugation, its type (p,p), its weight twice its codimension.

`every_class_on_the_seat`
`weight_is_twice_the_codimension`

The host keys the sentence
A class with a cycle and a class without one sit on the same seat with the same codimension.

`host_keys_the_sentence` · `hodge_seat`
