THE ROW SPLIT: SMALL DATA PROVED, LARGE DATA THE ONE BIT

THE DIVISION BY THE SIZE OF THE DATUM · THE VALUE IS EXACTLY ITS REAL PART AND ITS UNICORN PART

THE THRESHOLD IN THE CRITICAL NORM

REAL PART · SMALL DATA	UNICORN PART · LARGE DATA
sealed by the cited small-data theorem	the one bit, supplied by the act

The cut at every size

The value is exactly its real part and its unicorn part.

`value_iff_real_and_unicorn` · `whole_iff_real_and_unicorn`

The real part, proved

Every small datum is regular, by the cited theorem carried as a field.

`real_part_small`

No bypass

Given the cited theorem, the value is exactly the unicorn part, the large data.

`no_bypass_at_small_data` · `unicorn_is_large_data`

The unicorn part is load-bearing

The staged world carries the small-data field and the real part, and fails the value on its large data.

`unicorn_part_is_load_bearing` · `unicorn_blocked_above_every_size`

The dyadic cascade is cut

For every bound the doubling cascade passes it at a dyadic step no later than the bound.

`dyadic_cascade_is_cut` · `doubling_breaks_the_speed_limit`

The residue and its seat

Given the one implication, the sentence; the instance seat is regularity of every large datum.

`residue_is_the_sentence` · `seat_is_the_unicorn`
