THE WALLS: NOTHING ESCAPES THE BIT

STEP 9 · THE WALLS: EVERY ZERO-BIT ROUTE BARRED BY THEOREM

Existence as given forces nothing

It carries the form; no given statement is the value on every frame.

`given_carries_the_form` · `given_is_not_the_value`

No keyless premise

What every frame shares yields the value on no frame where it fails.

`keyless_forces_nothing`
`no_record_principle_decides`

The record wall

The calm and counter frames share a record and split on the value.

`record_decides_nothing` · `record_wall_on_frames`

The energy record

The energy inequality holds on a blowup frame; the energy record decides nothing.

`energy_does_not_decide`
`energy_record_decides_nothing`

No finite record

No finite record forces the value, and no symmetry lifts a decided datum.

`finite_record_never_forces` · `no_symmetry_lifts`

Speed and cascade

The speed limit and the cascade are each load-bearing.

`speed_is_load_bearing` · `cascade_is_load_bearing`

DECIDED BY THE KERNEL

The dyadic cutoffs

The doubling cascade passes 1, 12, 100, 1000, 4096 at steps 1, 4, 7, 10, 13.

`dyadic_cutoffs`

DECIDED BY THE KERNEL

Doubling breaks the limit

No cascade that doubles at every dyadic step holds every stage to c · E · T.

`doubling_breaks_the_speed_limit`
`dyadic_cascade_is_cut`

The unicorn block

Above every size no reading of the record returns the world.

`unicorn_blocked_above_every_size`

No zero-bit route survives. Every route to global regularity passes the bit, and the walls of the row are one theorem.

READING theorem on no axiom at all · binding theorem on Lean's standard axioms · definition or structure · names shown by their last component
