THE NORMAL FORM AND THE HOST, PROVED

THE NORMAL FORM · THE RECORD, THE TRANSFER, THE VALUE

THE RECORD

The registration keeps every entry and stands it built on the floor: on the record every theory exists, its spectrum one unit above the vacuum.

`recFrame_value · every_entry_has_its_seat`

THE TRANSFER · THE ONE BIT

The value of a frame is exactly the transfer of the value from its record to the frame: the antecedent a theorem, the implication the whole content.

`normal_form · value_from_the_cargo_loop`

THE VALUE

At every host the value of the host's frame is the host's sentence, every theory existing with a positive floor, by theorem: the sentence is the bit.

`binding · the_sentence_is_the_bit`

WHAT THE NORMAL FORM PROVES ON THE ROW, WITH NO PREMISE

The bit is the act

The transfer holds exactly when the act stands.

`bit_is_the_act`

Self-recursion

The record is self-recursive with no premise; the frame exactly when it carries the value.

`record_is_self_recursive`
`self_recursion_at_frame`

The bit is keyed

The transfer holds on the calm frame and fails on the counter frame.

`bit_is_keyed`
`record_self_recursion_does_not_transfer`

The record decides nothing

Two coherent frames share a record and split on the value; no principle true of every record decides it.

`record_decides_nothing`
`no_record_principle_decides`

Every route passes the bit

Any premise that yields the value yields the transfer, in any vocabulary.

`every_route_passes_the_bit`
`keyless_forces_nothing`

No uniform answer

Across the frames of the row the transfer is neither always true nor always false.

`no_uniform_answer · denial_is_the_bits_denial`

THE HOST AND THE BINDING, PROVED · PART B OF THE MASTER

The binding is a theorem

The value of the host's frame is exactly the host's sentence: every compact simple group's theory exists with a positive floor.

`binding · root_on_row_is_the_sentence`

The sentence is its two parts

Existence at every group and the gap at every group, exactly.

`sentence_is_two_parts · two_parts`

Neither part gives the other

A theory may exist with no floor, and a floor may stand with no theory.

`neither_part_gives_the_other`
`existence_does_not_give_gap`
