THE ROW SPLIT: STRONG COUPLING PROVED, WEAK COUPLING THE ONE BIT

THE DIVISION ON THE LATTICE · THE VALUE IS EXACTLY ITS REAL PART AND ITS UNICORN PART

THE THRESHOLD β_0

REAL PART · STRONG COUPLING
sealed by the cited lattice fields

UNICORN PART · WEAK COUPLING, THE CONTINUUM
the one bit, supplied by the act

The cut at every coupling
The value is exactly its real part and its unicorn part.
`value_iff_real_and_unicorn` · `whole_iff_real_and_unicorn`

The real part, proved
Every entry at strong coupling exists and is gapped, by the cited fields.
`real_part_strong` · `strong_coupling_decided`

No bypass
Given the cited fields, the value is exactly the unicorn part, the weak coupling.
`no_bypass_at_strong_coupling` · `unicorn_is_weak_coupling`

The unicorn part is load-bearing
The weak lattice carries both cited fields and the real part, and fails the value above the threshold.
`unicorn_part_is_load_bearing` · `strong_does_not_reach_continuum`

The aperture is one bit wide
Above every coupling no reading of the record returns the world; one odd supplied bit calibrates it.
`unicorn_blocked_above_every_coupling` · `aperture_is_one_bit`

The residue and its two halves
Given the one implication, the sentence; the residue is existence and the gap, its seat the weak coupling.
`residue_is_two_halves` · `seat_is_the_unicorn`
